■ How It Works

A GPS tracking unit is a device that uses the Global Positioning System to determine the precise location of a vehicle, person, or other asset to which it is attached and to record the position of the asset at regular intervals.

Our fleets are equipped with such units to track their location. Always knowing where fleets are, allows us to respond quicker to customer emergencies and to location inquiries, serve more customers, and confirm job completion.

One can track his consignment on the web portal. This helps our customers in planning their supply chain efficiently.

When the drivers know they are being tracked, they become more efficient at each jobsite. When your dispatch has the tools to re-route a driver in a moment's notice, the fleet becomes more efficient. This allows us to serve more customers in less time.

Newly Introduced Mobile Tracking Solution To Give Us A Better Control Over The Truck In-transit.

Some Of Our Happy Clients

For last 3 decades we have been rendering our services to most of the big tea Companies and other big multinational companies. Our working style suits the corporate houses and our infrastructure & services helps big companies to improve on their logistics cost and efficiency. Our aim is to fulfil our customer demands by the help of technology and continuous changes.
